

IBM CV862G - DB2 11 FOR Z/OS IMPLEMENTATION WORKSHOP

Dauer: 5 Tage

Nr.: 37369

Durchführungsart: Präsenztraining

Preis: 3.650€ netto / 4.343,50 € inkl. 19 % MwSt.

Zielgruppe: Anyone responsible for maintaining, installing or migrating DB2 10 for z/OS to DB2 11 for z/OS, or installing DB2 11 for z/OS.

Schulungsmethode: presentation, discussion, hands-on exercises, demonstrations on the system.

Voraussetzungen: The following prerequisites are suggested: The basic concepts and facilities of DB2
The basic concepts of Structured Query Language (SQL)
z/OS Time Sharing Option (TSO) and the z/OS interactive System Productivity Facility (ISPF)
Course CV832 Database Administration Part I or equivalent Work experience in a z/OS environment
Course CV852 System Administration or equivalent
Work experience in a z/OS environment
Defining and allocating z/OS data sets using z/OS job control language (JCL) or equivalent experience.

This course is for installers of DB2 10 z/OS and/or migration to DB2 11 for z/OS using the Install CLIST. The participants are involved in lectures that explain DB2 11 components and pointers, and the processes used to install or migrate from DB2 10 for z/OS. To reinforce the lectures, a series of labs are provided to give each participant hands-on experience installing DB2 10 for z/OS and migrating to DB2 11 for z/OS.

Students access a mainframe environment for the labs.

Programm

Key topics:

- Installation preparation for DB2 10 for z/OS
- Installation CLIST
- Installing the DB2 10 subsystem
- Verification of DB2 10 with the sample applications
- Performing parameter update
- Migrating to DB2 11 conversion mode
- DB2 10 enabling-new-function and new-function modes
- Verification of DB2 11 with the sample applications
- 10-byte RBA and LRSN (new)

Objectives:

After completing this course, you should be able to:

- Prepare z/OS TSO environment to run the Install CLIST
- Provide appropriate parameters for the Install CLIST
- Execute the Install CLIST
- Define DB2 10 for z/OS
- Define VSAM catalog and alias
- Define system data sets and databases
- Initialize system data sets and databases
- Define DB2 10 for z/OS initialization parameters
- Define user authorization exits
- Record DB2 11 for z/OS data to SMF
- Establish subsystem security
- Verify the DB2 10 for z/OS installation
- Update subsystem Parameters
- Create a new subsystem parameter module
- Migrate DB2 10 for z/OS to DB2 11 for z/OS Conversion Mode
- Enable DB2 11 for z/OS New Function Mode
- Verify migration
- Convert the BSDS and Catalog/Directory to 10-byte RBA and LRSN usage
